# **Aesculap Endoscopic Technology**

# AdTec<sup>®</sup> bipolar

THE BLUE (R) EVOLUTION

A new standard for your safety and safety of your patients

### THE BLUE (R)EVOLUTION

Ever since its launch in 1999, the **AdTec** product line has enjoyed great success with its users. And it's no surprise the range's blend of safety, ergonomics and cost-effectiveness makes it a real winner.

**AdTec** bipolar combines bipolar electric ablation with a new and previously unheard of level of tactility which makes these instruments safer than ever before for both you and your patients.

This highly innovative product was developed through the use of new materials - ceramic, steel and plastic - and combining these components using new manufacturing technologies.

But there's always room for improvement, even for a product that's already excellent! So Aesculap has systematically refined these instruments, making them even more effective in daily use – and this new generation of instruments is available now – **Evolution** 

The stability of the jaw part has been enhanced and the scissors now cut for more effectively, thereby increasing the life of the instruments. In addition, the range has been expanded through the addition of new types of jaws – which means that the range is now more versatile. Also, the instruments are now more readily identifiable in **blue**: blue ceramicinside the jaw, blue insulation in the pull rod, blue marking on the handles.

Why not join the **AdTec**bipolar **revolution** – and experience these exciting new bipolar endoscopic instruments for yourself!

## CONCEPT

AdTec bipolar stands for a totally new bipolar instrument technology. The most modern materials stand for safety, high tactility, universal application and, of course, high quality.

Patent: DE 196 08 716

US 5 853 412

### **TACTILITY**

#### High tactile feeling

 The exact feeling of the touch is transmitted back to the user, letting him decide how firmly he wants to grasp the tissue.

## **SAFETY**

#### Safety up to the tip

- A new design guarantees excellent coagulation results.
- Safe closure of even large arterial vessels.
- No "slipping effect" when grasping and preparing.
- No current leakage thanks to bipolar technology.
- Secure grasping, cutting and precise dissection of delicate structures.

### **UNIVERSAL**

#### Modular design

 Simple concept, easy handling: the same features as the monopolar instruments.

#### Universal use

- Can be used in all laparoscopic indications in gynaecology, general and vascular surgery.
- For any tissue and delicate structures.

## COST EFFECTIVENESS

Preparation, care and sterilization of the new range is as convenient, fast and safe as for the monopolar instruments.

The **AdTec** products are reusable and therefore highly cost-effective. Their modular design allows for inexpensive replacement of individual components as needed.
