

B. Braun Meshes

Optilene® Mesh Elastic

Mesh for incisional and inguinal hernia repair

Elastic lightweight and large pore mesh

Optilene® Mesh Elastic

Maintaining the natural abdominal wall physiology

elastic mesh

Multidirectional elasticity

for highest patient convenience

Lightweight mesh

for a better healing response

Large pores

for ideal scar formation and a natural abdominal wall physiology

The multidirectional elastic mesh is able to adapt to all movements taking place in the abdominal wall. Optilene® Mesh Elastic is the ideal mesh for incisional hernia repair and can also be used for inguinal hernia repair.

Ideal for incisional hernia repair

and for inguinal hernia repair

Easy placement

due to excellent handling characteristics

large pores

The new honeycomb like structure with the large pores enables for ideal healing and formation of an elastic scar. Due to the multidirectional elasticity of the structure an excellent abdominal wall physiology is maintained.

Product range

Article No.	Dimensions	Contents	
1064900	30 x 30 cm	5 pieces	
1064910	15 x 15 cm	5 pieces	
1064940	20 x 30 cm	5 pieces	
1064920	10 x 15 cm	5 pieces	
1064930	7.5 x 15 cm	5 pieces	

Optilene® Mesh Elastic

Multidirectional elastic, lightweight and large pores

Elasticity comparison

Elongation at 16 N (Measurements according to DIN EN ISO 13934-1)

If Mesh materials are implanted offering less flexibility than 20-30% a restriction of the abdominal wall physiology must be taken into consideration¹

¹Chir Gastroenterol 2003; 19 (suppl 2): 7 - 11

Product features

Material	Monofilament Polypropylene
Construction	Knitted
Weight	48 g/m ²
Thickness	0.55 mm
Pore size	3.6 x 2.8 mm
Indications	Incisional Hernia Inguinal Hernia Reconstruction of chest wall
Contraindications	Optilene® Mesh Elastic should not be implanted in contaminated and infected areas as well as in children during the growth phase
Sterilisation	Ethylene oxide
